

Poughkeepsie-Dutchess County Transportation Council

Marcus J. Molinaro, Chairman

To: City and Village Mayors; Town Supervisors
Highway Superintendents and Public Works Commissioners
Police Agencies
Dutchess County Traffic Safety Board

From: Mark Debal, Transportation Program Administrator
Poughkeepsie-Dutchess County Transportation Council

Date: November 28, 2016

Subject: High-End Speeding Analysis for Dutchess County (REVISED)

The Poughkeepsie-Dutchess County Transportation Council (PDCTC) recently completed an analysis of speeding patterns on county and local roads, based on data collected from our annual traffic count program. The PDCTC typically conducts 250-275 traffic counts annually, with individual locations counted every three years. Though the program originally focused on collecting traffic volume data, we now collect data on vehicle speeds and classifications. Recognizing the value of such information to our communities, we initiated an analysis of the speed data to identify potential speeding issues on county and local roads. This analysis was funded through the PDCTC's federally-supported planning program.

The speeding analysis sought to identify road segments with high percentages of 'high-end' speeders: defined by staff as those travelling more than 10 mph over the posted speed limit. By highlighting road segments with high-end speeding, we hope to assist elected officials, law enforcement agencies, and highway departments with their efforts to target speed enforcement, implement traffic calming measures, and allocate resources to reduce speeding and improve traffic safety in the county. Below is a summary of our findings:

a. Overview

Staff analyzed speed data collected from 903 unique road segments in Dutchess County over a four-year period (2012-2015). The speed data was collected through our annual traffic count program, which relies on automatic traffic recorders (pneumatic tubes placed across the road) placed for 3-7 days at designated locations. Our analysis indicated that nine percent of the road segments (84 segments total) had 85th percentile speeds (the speed driven by 85 percent of drivers) more than 10 mph above the designated limit in at least one direction (e.g. eastbound or westbound). Staff categorized these road segments as having high-end speeding.

b. Jurisdiction

Our analysis showed that about 60 percent of road segments with high-end speeding were located on County roads, while 40 percent were on local roads. About 45 percent of the 84 road segments experienced high-end speeding in both directions (e.g. northbound and southbound), while about 55 percent exhibited high-end speeding in only one direction (e.g. northbound only).

While speed enforcement is shared by state, county, and local police agencies, and physical improvements are made by applicable road owners, speeding is undoubtedly a concern for all our communities. Road segments with high-end speeding were located in 23 of our 30 municipalities. The Town of Poughkeepsie had the most segments with high-end speeding (16), followed by the Towns of Dover, East Fishkill, Fishkill, Pawling, and Stanford (each with six).

c. High-End Speeding Extent/Locations

Of the 84 road segments with high-end speeding, 83 percent (70 segments) had 85th percentile speeds between 10-15 mph over the speed limit, 12 percent (10 segments) had 85th percentile speeds between 15-17.5 mph over the speed limit, and five percent (four segments) had 85th percentile speeds more than 17.5 mph over the speed limit: Hoffman Rd. between Silvernails Rd. and Ryan Rd. in the Town of Pine Plains, CR 26 (Dover Furnace Rd.) between NYS Route 22 and Ridge Rd. in the Town of Dover, Sheafe Rd. between Woodland Dr. and Old Post Rd. in the Town of Poughkeepsie, and Zacks Way between Boardman Rd. and NYS Route 376 in the Town of Poughkeepsie.

d. Directional Differences

Staff also analyzed differences in the 85th percentile speeds by direction. About two-thirds of the road segments with high-end speeding (55 segments) had less than a three mph difference between the 85th percentile speeds of each direction (e.g. northbound and southbound). One-quarter of the road segments (21 segments) had a 3-6 mph difference, and ten percent (eight segments) had a 6-10 mph difference. These difference are likely the result of varying road geometries such as a hill, where one direction travels more slowly while ascending and the other more rapidly while descending.

For detailed information about your municipality or specific roads, please refer to the enclosed information, which includes the complete list of county and local road segments with high-end speeding, as well as maps and tables specific to each municipality with high-end speeding. Please note that road segments that cross municipal borders will appear on only one municipal table and map. Also, note that speed limits are based on our current database, and reflect the limit at the time the count was taken. Some speed limits have changed in the interim, and others may be incorrect in the database.

If you have any questions or comments about the analysis, please contact me at (845) 486-3600 or by email at mdebald@dutchessny.gov. We are especially interested in knowing if you find this information useful or if you have updated data on speed limits within your jurisdiction. Depending on interest, we will update the analysis in future years. Please note that the PDCTC periodically conducts Safety Assessments at high-crash locations on local roads; if you wish us to research a specific location or have candidates for a possible Safety Assessment, please contact us.

Yours truly,

//original signed//

Mr. Mark Debald

Transportation Program Administrator
