

Wipe Out Lead

By Renovating Right!

Dutchess County Department of Health and the City of Poughkeepsie are partnering together to help homeowners and tenants have a Lead Safe home.

Did you know?

- Homes built before 1978 may contain lead paint.
- Improper removal of lead-based paint can increase the danger of lead poisoning to your family.
- Certain types of renovations can release lead from paint and dust.

If you think your home may have high levels of lead, have your children and home tested for lead.

Use Lead-Safe Work Practices!

Always use a professional who is trained to remove lead hazards safely or contact Dutchess County Department of Health for Lead Safe Removal training for your home.
