Village of Wappingers Falls	63

Background

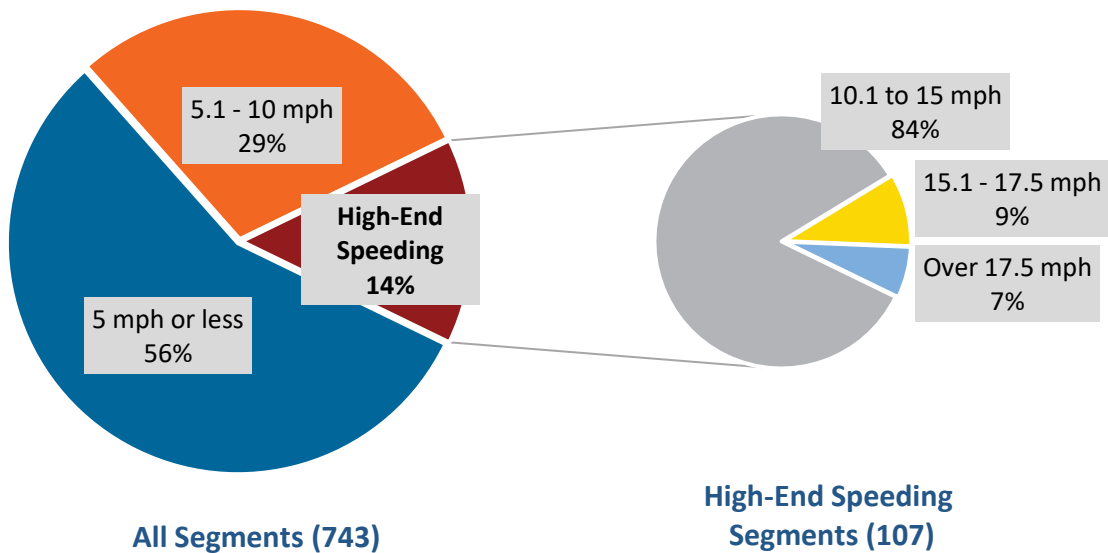

This report analyzes speeding patterns on County and local roads in Dutchess County, based on data collected through the Dutchess County Transportation Council's (DCTC) traffic count program and the New York State Department of Transportation (NYSDOT).¹ Each year, we conduct about 150–200 traffic counts, with most locations surveyed every three years.

This analysis identifies road segments with significant levels of "high-end" speeding—defined as speeds exceeding the posted limit by more than 10 mph—as well as segments with high numbers and rates of speed-related crashes. By highlighting these locations, we aim to support elected officials, law enforcement, and highway departments in targeting speed enforcement, implementing traffic-calming measures, and allocating resources to improve safety and reduce speeding.

Overview

For 2024, we analyzed speed data for **743** unique road segments in Dutchess County over a five-year period (**2020-2024**). The five-year timeframe ensures data from all active monitoring stations, some of which operate on a five-year schedule, is captured. Speed data was collected using automatic traffic recorders—pneumatic tubes placed across the roadway—set at designated locations for 3-7 days.

Figure 1: MPH Above Speed Limit Based on 85th Percentile Speeds (2020-2024)

¹ Traffic data for Dutchess County can be accessed via DCTC's Traffic Data application: gis.dutchessny.gov/traffic-data. Statewide traffic data and annual estimates are available through NYSDOT's Traffic Data Viewer: nysdottrafficdata.drakewell.com.

We used 85th percentile speeds to determine where there was high-end speeding. This represents the speed that 85% of drivers travel at or below and is a commonly used indicator of speed patterns. We compared the 85th percentile speed to the posted speed limit for each road segment. If the 85th percentile speed exceeded the speed limit by more than 10 mph in at least one travel direction (e.g., eastbound or westbound on an east-west road), we flagged the segment as having high-end speeding.

Of the 743 road segments analyzed, 14% (a total of 107 segments) exhibited high-end speeding. This is similar to results from previous years: 15% of segments in 2023, 14% of segments in 2022, 15% in 2021, and 16% in 2020. Figure 1 illustrates the distribution of 85th percentile speeds across all 743 analyzed road segments.

Jurisdiction

Of the 107 road segments with high-end speeding, 53 were on local roads and 54 on County roads. High-end speeding segments were present in 24 of the county's 30 municipalities. Consistent with previous years, the Town of Poughkeepsie had the highest number of such segments (25), followed by the Town of Wappinger (10), Town of East Fishkill (8), Town of LaGrange (8), and Town of Hyde Park (7). Six municipalities had no segments with high-end speeding: the towns of Milan, Union Vale, and Washington, and villages of Millbrook, Red Hook, and Rhinebeck.

Extent of High-End Speeding

Of the 107 road segments with high-end speeding, 84% (90 segments) had 85th percentile speeds between 10.1 and 15.0 mph over the speed limit. Nine percent (10 segments) had 85th percentile speeds between 15.1 and 17.5 mph over the limit, while 7% (7 segments) had speeds more than 17.5 mph over the speed limit. Figure 2 below lists the seven road segments where the 85th percentile speeds were more than 17.5 mph over the posted limit.

There are many potential reasons for this level of speeding. Downhill slopes can naturally increase a vehicle's speed, making it harder for drivers to stay within the limit. Road geometry, such as wide lanes or long straight sections, may subconsciously encourage faster driving. Additionally, a low speed limit that doesn't match the road's design can lead drivers to perceive it as unrealistic and ignore it.

Figure 2: Road Segments with 85th Percentile Speeds more than 17.5 MPH Over the Speed Limit

Road Name	From	To	Municipality	MPH Over Limit
Zack's Way**	Boardman Rd	NY 376	C/T/Poughkeepsie	19.5
CR 62 (Sharon Rd)**	Connecticut State Line	Millerton VL	T/North East	19.5
Bedell Rd*	NY 115 (Salt Point Trnpk)	Van Wagner Rd	T/Poughkeepsie	19
Fishkill Hook Rd	E Hook Rd	Fishkill Hook Rd	T/East Fishkill	18

CR 74 (Cedar Av)**	NY 113 (Spackenkill Rd)	Poughkeepsie City Line	T/Poughkeepsie	18
CR 100 (Creek Rd)**	Cottage Rd	Cream St	T/Poughkeepsie	17.8
Cedar Hill Road*	CR28 (Old Hopewell Rd)	Dorothy Ln	T/Wappinger	17.8

*These segments had 85th percentile speeds more than 17.5 mph over the speed limit in 2023.

**These segments had 85th percentile speeds more than 17.5 mph over the speed limit in 2023 and 2022.

Directional Differences

Slightly more than half (56%) of the road segments with high-end speeding experienced it in both travel directions (e.g., northbound and southbound). The remaining 44% exhibited high-end speeding in only one direction. Among these segments, 62% had speed differences of less than 3 mph between the two directions, 36% showed differences of 3 to 6 mph, and 2% had differences exceeding 6 mph.

These speed differences can occur for several reasons. On some roads, features like hills or curves may lead to higher speeds in the downhill direction compared to the uphill direction. In other cases, proximity to a higher-speed road might play a role, as drivers accustomed to faster speeds may fail to adjust appropriately when transitioning to a lower-speed road.

Relationship between High-End Speeding and Crashes

The attached tables present an analysis of crashes from the most recent five-year period for which data is available (2020-2024). This data was sourced from NYSDOT’s CLEAR Crash Data Viewer. We filtered the data to include only those crashes where the responding officer identified unsafe speed as a contributing factor. It does not include crashes where speed may have played a role but was not specifically noted as a contributing factor by the officer.

The number of speed-related crashes and the crash rate for each road segment are provided in the Appendices. The crash rate is calculated as the number of speed-related crashes per million vehicle miles traveled (VMT) on each segment.² On segments with high-end speeding, the rates range from zero (indicating no crashes during the study period) to 4.24, with an overall rate of 0.0045 speed-related crashes per million VMT. This rate is 6 times higher than the overall speed-related crash rate for a broader sample of local and County-owned roads in Dutchess County, which stands at 0.0008.³

It is important to note that on low-volume or short road segments, a single crash can significantly impact the crash rate. Therefore, the number of speed-related crashes should be considered alongside the crash rate when assessing the safety concerns on a segment. Figure 3 below lists the five road segments with

² The crash rate per million VMT is the number of crashes on the segment during the five years multiplied by one million, then divided by the VMT. To find VMT for each segment, we use the Annual Average Daily Traffic (AADT) generated by our traffic counts and multiply it by 365, then multiply it by the number of years in the study period (5) to estimate the total number of vehicles on the segment from 2020-2024. We then multiply that by the length of the roadway segment as calculated in our GIS database.

³ The broader sample contains the 743 traffic count segments for which the necessary data (average daily traffic and segment length) exists.

the most speed-related crashes, while Figure 4 lists the five road segments with the highest speed-related crash rates.

As shown on the accompanying maps, many road segments not identified with high-end speeding still have clusters of speed-related crashes. These clusters may indicate locations with challenging road geometry, such as curves, where drivers may be following the posted speed limit but still driving too fast for conditions. They could also reflect the presence of a smaller proportion of high-end speeders than captured by the 85th percentile method.

Figure 3: Road Segments with Highest Number of Speed-Related Crashes

Road Name	From	To	Municipality	MPH Over Limit	Speed-Related Crashes	Speed-Related Crash Rate
CR 21 (Noxon Rd)**	TSP	NY 82	T/LaGrange	10.2	23	1.85
CR 6 (Old Route 22)*	CR 26 (Cricket Hill Rd)	Lime Kiln Rd	T/Dover	10.3	20	1.48
CR 104 (New Hackensack Rd)*	Widmer Terr	Wildwood Dr	T/Wappinger	12.0	18	1.40
Shenandoah Rd	Miller Hill Rd	Lime Kiln Rd	T/East Fishkill	16.6	10	1.48
Robinson Ln*	Wappinger T/L	CR 21 (Noxon Rd)	T/LaGrange	12.0	10	1.99

*These segments were also in the top five for speed-related crashes in 2023.

**These segments were also in the top five for speed-related crashes in 2023 and 2022.

Figure 4: Road Segments with the Highest Speed-Related Crash Rates

Road Name	From	To	Municipality	MPH Over Limit	Speed-Related Crashes	Speed-Related Crash Rate
CR 34 (Baxtertown Rd Ext)*	NY 9D	CR 34 (Baxtertown Rd)	T/Fishkill	15.2	2	4.25
CR 68 (North Quaker Hill Rd)	CR 68 (North Quaker Hill Rd)	Byrds Hill Rd	T/Pawling	11.4	2	3.63
CR 38 (Van Wagner Rd)*	Marple Rd	Abandoned Railroad	T/Poughkeepsie	12.5	2	3.49
CR 91 (Creek Rd)	CR 28 (New Hamburg Rd)	Village Line	T/Wappinger	11	4	3.44
Ketchamtown Rd	NY 9D	CR 35 (Osborne Hill Rd)	T/Wappinger	14.3	9	3.00

*These segments were also in the top five for speed-related crash rates in 2023.

How Should Road Owners Use this Report?

This report highlights key factors to consider when addressing speeding issues. Should road owners prioritize roads with the highest speeding levels, the most speed-related crashes, or the highest crash rates? There is no one solution that applies to every situation. Instead, this report serves as a resource to assist road owners in identifying areas of concern and prioritizing improvement efforts.

In addition, our countywide [Safety Action Plan](#) includes a systemic screening analysis that identifies road segments that are higher-risk for speed-related crashes. The details of that analysis are in the [Hotspot and Network Screening Analysis](#) (Appendix E), and the results can be seen on our [Systemic Screening Map](#) (select 'speeding crashes'). The Plan's [Systemic Countermeasures Report](#) includes packages of improvements to address speeding (see Table 2.5 on pages 35-38).

The DCTC is available to provide additional data, analysis, and consultation upon request, supporting road owners and enforcement agencies in developing strategies to address safety issues.

Questions and Comments

For detailed information about a municipality, specific road, or crash data, please refer to the enclosed information, which includes a complete list of County and local road segments with high-end speeding, and maps and tables for each municipality with a high-end speeding road segment. There are no maps for municipalities without identified high-end speeding. Road segments that cross municipal borders are listed on the table and map for each affected municipality.

Speed limits are based on our current database and reflect the limit at the time the count was taken. Some speed limits may have changed, and others may be incorrectly listed in the database; if you notice an incorrect speed limit, please let us know.

If you have any questions or comments about this analysis, please contact us at dctc@dutchessny.gov. Previous analyses are available on our website on the [Publications](#) page.
