Customers can expect flushing of water mains to take place between the hours of 8:00 a.m. and 4:00 p.m.

Flushing of the distribution system is done periodically to improve conditions within the pipes. While the pipes are being flushed, customers may experience turbidity and discoloration of their water. **Customers are also advised not to run the water for 2-3 hours after flushing and to avoid washing clothes on that day.** If your hot water continues to be discolored after your cold water has cleared up, flushing your hot water tank is often the answer.
